WeatherHawk now Available in Europe

Logan, UT – 08/18/2003 – Today, WeatherHawk jointly announced with WeatherHawk UK, a distribution Agreement for Europe, covering the WeatherHawk family of WIRELESS weather stations.

WeatherHawk is pleased to announce the launch of the new Weather Station from its new European Service Centre based in the UK. Only available on-line, you can buy an entry-level Weather Station from £945 at www.weatherhawk.co.uk

WeatherHawk is the most durable, versatile and easy to use weather station available today and can be easily installed in minutes by the average home owner, teacher, proprietor or facilities manager. WeatherHawk is delivered in a single box with wind speed, wind direction, air temperature, relative humidity, solar radiation, barometric pressure and rainfall sensors fully installed and preconfigured for immediate use. After placing WeatherHawk on a pole or tripod (two mounting options are available on www.weatherhawk.co.uk), the user installs Virtual Weather Station™ software (VWS) on a PC. In addition to the seven basic weather parameters, WeatherHawk VWS software provides heat index, dew point, wind chill and even ETo (evapotranspiration) information.

The VWS Internet option will enable connection of the WeatherHawk to the World Wide Web – the user can then access the weather on “their” WeatherHawk from any Internet gateway in the world, 7 days a week, 24 hours a day!

WeatherHawk is available in two configurations. WeatherHawk can be connected directly into an RS232 Serial data port of a PC, or to any available USB port with an optional adapter. WeatherHawk 240, the Wireless WeatherHawk transmits via spread spectrum radios in the 2.4 GHz radio band (NB: check with local regulations before purchase). WeatherHawk radios are capable of a line of sight data transmission range up to 0.4km without repeater transceivers.

Hardware options such as AC power converters, grounding kits and stake kits enable the user to adapt the standard WeatherHawk to virtually any installation or input power requirement. A solar power option even eliminates the requirement for external power, or battery changes, by using solar energy to recharge the battery pack included with every WeatherHawk.

WeatherHawk is manufactured in the United States, and supported worldwide through a combination of affiliated companies and independent dealers. Please contact WeatherHawk or WeatherHawk UK, as indicated below for additional information.

WeatherHawk is a Trademark of Campbell Scientific, Inc. in the United States and/or other countries.
Virtual Weather Station Software is a Trademark of Ambient, L.L.C.
Windows is a Trademark of the Microsoft Corporation.
