

WeatherVoice is your Weather Report Telephone Call Center – plus a lot more.....

Turn any PC into a Weather Report Telephone Call Center with Ambient's WeatherVoice Plug-in for Virtual Weather Station software.

Anyone can keep up to date on your local weather, from anywhere.

You can keep a watchful eye on your home, cabin or business, using only a simple phone line and a voice modem as the connection to computer and your own wireless digital WeatherHawk personal weather station.

(Note: Requires a PC with Windows 95/98/NT/2000/ME/XP, Virtual Weather Station Base, Pro or Internet Edition and Call Center Software)

WeatherHawk and Ambient make this possible with Virtual Weather Station's Voice Generation System

Virtual Weather Station's WeatherVoice is a text to speech converter and it is compatible with most text-to-speech voices. These text files can be automatically updated, inserting real-time weather conditions from your weather station, or even forecasts and warnings from the National Weather Service.

With WeatherVoice, you can:

- Use Virtual Weather Station's File Tags to insert live weather conditions from your personal weather station or your local METAR station into your outgoing answering message
- Combine with a third party PC Auto Call Center to provide a complete PC-based phone answering system. Keep up to date on your local weather from ANYWHERE there is a telephone!

What you Need to Get Started

You need the following to create a sophisticated Weather Reporting Call Center:

- A WeatherHawk personal weather station
- Virtual Weather Station Base, Pro or Internet Edition (NOTE: VWS Base Edition is supplied with WeatherHawk, PRO and Internet Versions are Upgrades)
- Ambient's WeatherVoice Plug- in
- A Voice Modem. (Note: Most modems provide Voice/Data/Fax, and most computers are now supplied with a fully featured modem but check your system and upgrade as necessary before purchasing a weather station and additional software.)
- A third party Call Center Software. We recommend:

Advanced Call Center:

About Virtual Weather Station

Virtual Weather Station is software that allows you to connect your personal computer to your weather station to display, plot and store data for comprehensive monitoring and analysis.

Virtual Weather Station brings your PC to life with a rich array of dynamic and colorful gauges, dials, graphs and charts. The desktop is completely customizable - you can arrange the virtual instruments based on your own personal preferences or application. You have literally over 1000 ways to display your data

Virtual Weather Station Internet Edition also features Email, FTP File Transfer, and HTTP file transfer. You can automatically send files to an FTP server or automatically send e-mail when alarm conditions occur.

Configuring WeatherVoice

WeatherFlash converts text files with "tags" into actual weather data, and then converts these files into wav files, which can be played back on your computer or voice modem. "File Tags" can also be inserted into the text file.

An example text file is as follows:

"You have reached John and Jane's WeatherHawk. The current temperature is....."
